

Managed Configuration for Android Devices

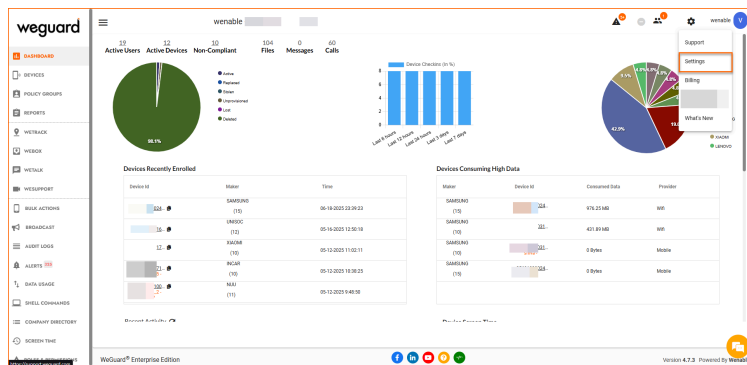

Managed Configurations allow IT administrators to remotely configure and control both app and device settings on Android devices without user intervention. Through WeGuard, these configurations are centrally managed at the account level, ensuring consistent setup across multiple policy groups. This capability streamlines overall device management, enhances deployment efficiency, enforces compliance, and minimises the risk of misconfiguration—making it an essential tool for managing large-scale Android environments.

Prerequisites

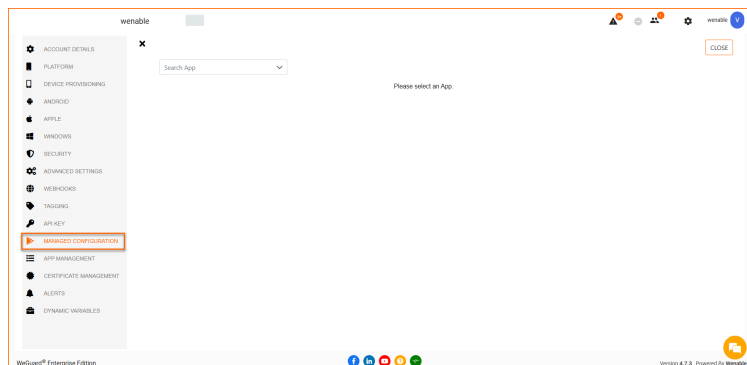

- The application should be added to the policy, which supports managed configurations. (Eg., Google Chrome)
- [Click Here for KB on How to Add Play Store Apps.](#)

Creating a New Configuration

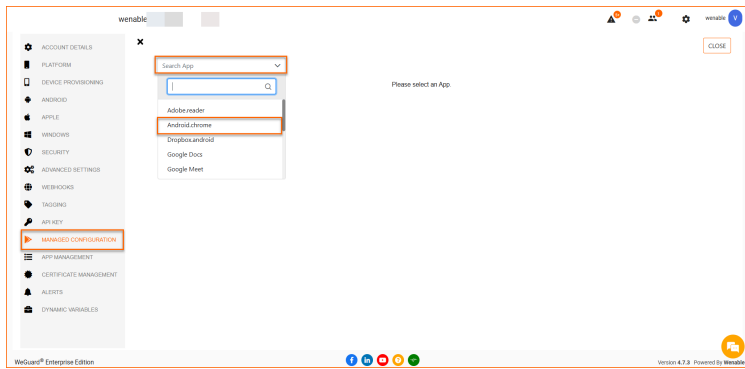

- Log in to WeGuard Console.
- Click the **cogwheel** () icon at the top of the WeGuard Console.
- Select **Settings**.

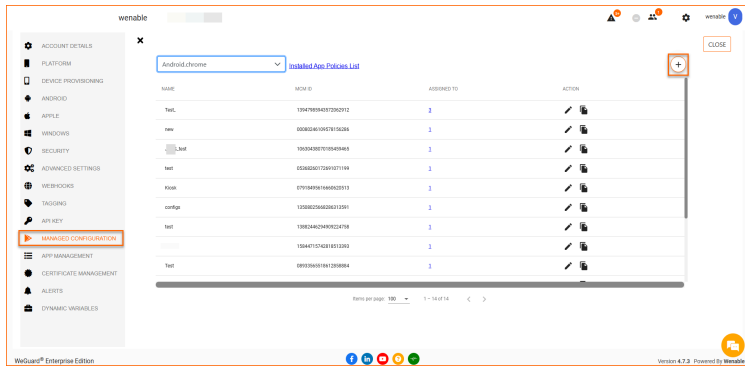

- Click **Manage Configuration** to open the configuration dashboard.

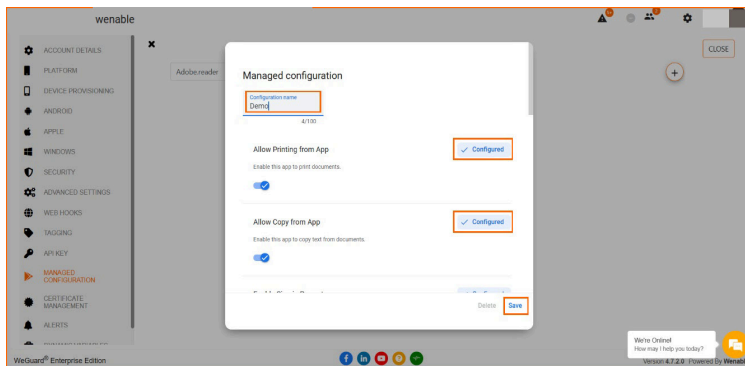

- Use the **Search App** field to find and select a Play Store app. A **dropdown** will display all Play Store apps associated with your account.

- Upon selecting an app, you'll see a list of **existing configurations** and the **policies** where the app is deployed. Click the "+" (**plus**) button.

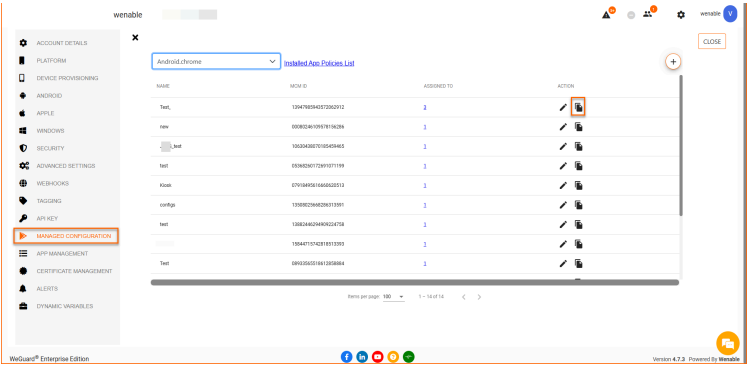

- Enter a **name** for the configuration.
- Fill out the required **configuration fields**.
- Click **Save**.

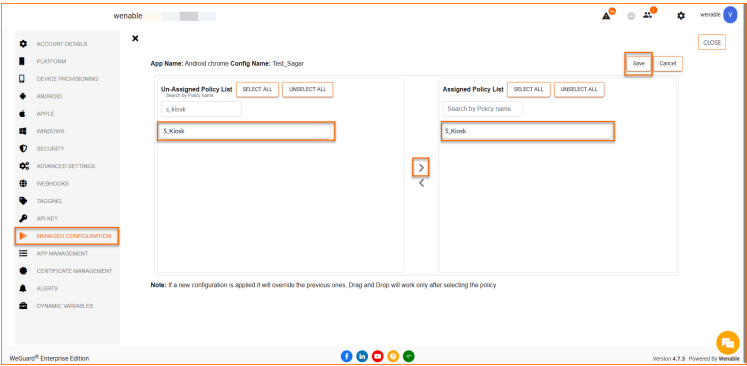

Assigning Configurations to Policies

- Click **Assign/Unassign** (**paper clip icon**) next to a configuration under the Actions.

- Select one or more policies from the available list.
- Move them to the **Assigned Policy List**.
- Click **Save**.

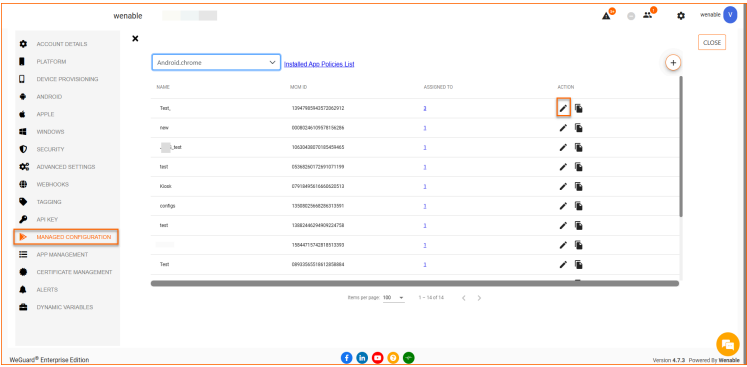

📄 If a policy already has a configuration, the new one will **replace** the existing configuration.

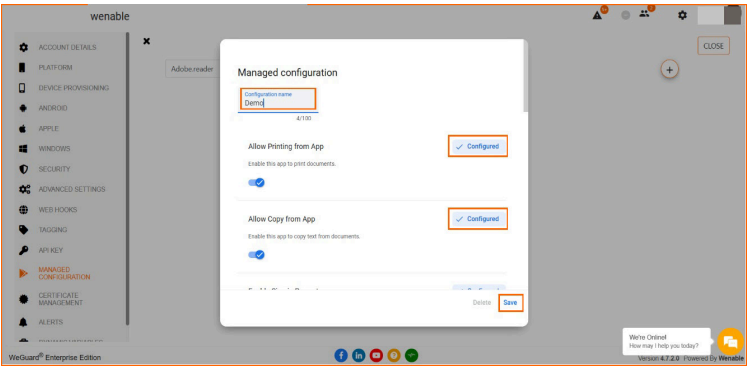

Editing a Configuration

Account admins can modify existing configurations.

- Click the **Edit** button in the **Action** column.

- Update the necessary fields. Click **Save**.

 *Group Admins and Observers cannot edit configurations.*

Deleting a Configuration

Only account admins can delete configurations **not currently assigned to any policy**.

- If the configuration is unused or unassigned by all the policies, a **Delete** icon will appear.

- Click **Delete**, then confirm in the pop-up window.

Configuration changes are logged in the **audit logs**.

1. Filter by the event type **“Managed Config”**.
2. Click the **‘i’ (info)** icon to view detailed change history.
